Methodological Notes: CGAP conducts two regular surveys on funding flows: the CGAP Microfinance Funder Survey and the CGAP MIV Survey. For the first time this year, data from both surveys was consolidated to present a comprehensive picture of cross-border funding for microfinance. The table above is based on data reported by 61 funders and 90 microfinance investment intermediaries. All data is as of December 2009. CGAP used data provided by microfinance investment intermediaries to estimate funding from individual investors and institutional investors. Growth rates are based on a subset of respondents for which data is available for all years covered by the surveys. If not specified otherwise, analysis is based on committed amounts.

*Commitments represent the stock of funds set aside for microfinance at a given time, whether or not disbursed. N = 61 funders + CGAP estimates

**Disbursements are the funds that funders actually transferred to recipients during a given year. N = 57 funders + CGAP estimates.

***Net new commitments represent the change in commitments in the survey year. N = 57 funders + CGAP estimates.

**** DFIs' commitments at market infrastructure and policy levels are not fully captured by this survey.

For questions or further data requests please contact Barbara Gähwiler at bgahwiler@cgap.org.
